ABSTRACT

A Messenger application is a feature or a program on the Internet to communicate directly among Internet users who are online or who were equally using the internet. In the last few years, several Messenger applications came into existence and they are very useful for communication purpose.

It's The Time for the next evolution in the Internet Communication. Bringing together different needs of users and Organization, is the unique vision for The Messenger. Although they've been a lot of Messenger apps, the futuristic vision to come up with some new ideas on what we think a Messenger should be, and with whom (for now) they should be interacting with.

Earlier there was no mode of online communication between users. In big or small organizations communication between users posed a challenge. There was a requirement to translate these communications from one language to other for further evaluation. There is no tagging to distinguish a message from other messages. The idea is to automate the existing Chat applications and make the users to utilize the software so that their valuable time can be saved.
